As the facilities developed for bookkeeper, while out in the shipping de-partment Mr. H. D. Coe has charge, and he business they could reach out farther more territory. While Wichits had at present a greater territory to supply than many other cities of more pretentle there was no inclination to agree upon any line that should be the boundary of the

THAT POT LIB.

An archeologist, after several hours of ssidnous application, deciphered the letters appearing oh the lid of that pot. The letters are "April 1st, MDCCCXC," which being translated into United States, mean "All Fools Day." This may satisfy some people but that don't explain how the let ters got there. The pot itself and its con southwest corner of Main and First, is two designs of doors, and are tents we deem of minor importance, of course, and the letters are without doubt and the necessary instruments the only men who could have probably the town the same night. How. J. Mead, the oldest settler writes us that the shand that had the heavey timber was the ext one above and that the other was no sland at all only a sand bar. Still that loes not account for the cilrious handwritthemselves is surely there. Michael Bock and several others who went to the ink to see the pot and the gold could of er no explanation of the lid mystery. The flow who manufactured the lid being unmestionally long since dead and the me who first discovered it having disappeared between two days the matter being be come more aggravating than a sixteen purare warranted in every respect, even to for however congratulate ourselves and readday neen by the Missouri Pacific for St.

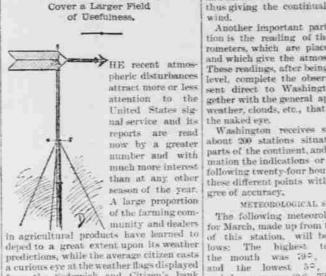

Lights as a committee from the board of any given length of time. They are the mysterous lid but of the pot and the gold ALLIANCE MASS MEETING.

The tendency of human nature to pry of a prophesy reminding the student of meteorology that even the government service is fallible. In the majority of cases the service makes a hit, having oints in the United States.

The strength and duration of certain ditions may be over or under estimated and thus a prediction may fail at certain points or unforseen influences may be at work and destroy the accuracy of the forecast. This liability to err is well understood by the patrons of the service and letracts very little from its value.

More commodious offices were planned in the new government building for the use of the observer, but on account of the dmirable exposure for the instruments or the roof of the Sedgwick it has been de ided that the present location will be held The station at this point is in charge o Dr. Fred L. Johnson, who by his courteous and affable demeanor has made many riends personally and for the service as vell. His care and tact in explaining the exact value of the local service to all who call or write for information has made the station indispensible.

The records of the past season are by the neans the least important feature of the service, and the intelligent farmer scan time the nature of the climate and how to take advantage of the changes which would, without these reports, require years of experience to grasp. Many of the farmers preserve the monthly summarie that are published to enable them to make comparisons from time to time, which is an invaluable aid to their judgment.

Daily bulletins are posted at theoffice, in nent places, showing the exact meterologleal conditions at fifty-four different points within twenty-four hours of Wichita, in most instances, and enable the reader to make some estimate himself of the weather for the following twenty-four hours. The service is already making an effort to ex-Mr. Geo. T. Page, a prominent attorney of Peoring Ills, is in the city for a day or Lawrence.

Inc. The practical test given was quite satisfactory within three or four months and in September of the same year the stock holders decided that the business.

Inc. The practical test given was quite satisfactory within three or four months and in September of the same year the stock holders decided that the business could be done. In July a telephone will be put in the main office thus affording telephone facilities to Wichita and neighboring cities.

of its predictions and records and there is a growing demand for more facilities. The Hurrying Huntreds of Hogs and Cars of Cartle. ad through it this entire section of ich the service is only anxious and willing to meet as soon as practicable. Frejuent changes and more comprehensive retates are these reports studied more careally then in this part of Kansas for here the old time honored signs upon which the farmers used to rely so successfully back east all fail and sometime more than a mere superficial glance at the indications is necessary to form a prediction of any The Wichita station is located

INSTRUMENT SHELTER on the fourth foor of the Salgwick stated, but who muck the lid exposed on the roof above. The most important of them are the thermometer. profound mysters. O'Shen and O'son anemometer, snow and rain guages and wind vane. An instrument shelter is conbrown any light upon the matter jumped | structed on the roof of sufficient height to bring the instruments above all local in-fluences and contains the thermometers. These are read morning and evening regularly at exactly 7 o'clock, simultane with all the stations in the service. The dry thermometer gives the temperature of ng on that lid, which everybody can see the air, a wet thermometer gives the temperature about midway between that of the atmosphere and that at which precipitation would occur. The dew point, or temperature at which precipitation occurs. readings of the wet and dry thermometers. In the nuly difference between the two there if that were possible. is estimated from a comparison of the mometers is that the wet built is dampened and registers a reduced temperature
